

ABSTRACT

An integrated media viewing environment including a user interface (UI) and a method for providing a program guide with an integrated media viewing environment. The integrated media viewing environment presents viewers with on-screen displays, e.g., a single, integrated on-screen display, that may be used to obtain, view and/or record media content, including programming that is currently airing, available via download or data streaming, available on an "on demand" basis, and/or available from local storage or removable media.
